1959, v. 42 [no. 4] p. 1160-1165.

The silanol groups of a silica preparation were determined by ignition and by reaction with LiAlH_4 (244 meq. SiOH per 100g silica). Part of these groups reacted with organic reagents forming organic derivatives of silica with Si-O-C bonds. Acetyl and benzoyl derivatives of silica were prepared which were organophilic and rapidly hydrolyzable by water. Silica chlorides were prepared by treatment of silica with SOCl_2 (50 to 80 meq. = SiCl per 100g silica) or with SnCl_4 (+Si-O-SiCl₃ groups). Alkoxy derivatives of silica were prepared by treatment of silica chlorides with different alcohols. These derivatives were organophilic and part of them hydrophobic. The sta-
